PROFESSIONAL SUMMARY

Backend-focused B.Tech Computer Science graduate (2025) with hands-on experience building full-stack web applications, developer tools, and production-grade async backend systems. Proficient in Node.js, Express.js, PostgreSQL, BullMQ, Redis, and Docker, with solid React.js skills and a published npm CLI tool. Built and shipped four projects — including a scalable async document processing system with job queues, retry logic, and containerised infrastructure. Known for clean, well-documented code and a systems-first engineering mindset. Seeking a backend or full-stack engineering role to contribute to scalable, real-world software.

TECHNICAL SKILLS

Languages : JavaScript, SQL

Frontend : React.js, HTML, CSS, Tailwind CSS

Backend : Node.js, Express.js, REST API Design, Clean Code Practices

Databases : MongoDB (Mongoose), Firebase Firestore, PostgreSQL

Mobile : React Native (Cross-platform)

Tools : Git, GitHub, Docker, Redis, BullMQ, VS Code, Figma

Soft Skills : Communication, Attention to Detail, Proactiveness, Problem-Solving, Individual Leadership

PROJECTS

Async Document Processing System [Live Demo](#)

Node.js · Express.js · BullMQ · Redis · PostgreSQL · Docker · Multer

- Architected a scalable background job processing system using BullMQ and Redis for async task queues, with PostgreSQL as persistent storage — fully containerised with Docker Compose for consistent local and production environments.
- Built a RESTful Express.js API with Multer-powered file upload handling; implemented full job lifecycle management — retry strategies, exponential backoff, failure event hooks, and a dedicated Status API for real-time job polling.
- Decoupled upload from processing via a dedicated queue worker to prevent request timeouts and enable horizontal scaling; structured codebase into isolated routes, controllers, producers, and workers following clean architecture and production-grade backend patterns.

GitHub Automation CLI Tool [View on npm](#)

Node.js · GitHub REST API · npm

- Built and published a Node.js CLI tool that automates Git repository setup, commit staging, and deployment workflows, eliminating repetitive manual steps.
- Integrated the GitHub REST API for automated remote repository creation directly from the terminal.
- Designed a multi-command interface with rollback on failure, partial commit support, and interactive user prompts; followed clean code principles with thorough documentation and inline error handling.

Event Booking Fullstack MERN Web App [Live Demo](#)

MongoDB · Express.js · React.js · Node.js · JWT

- Built a production-ready event booking platform using the MERN stack with JWT-based authentication and protected routes.
- Implemented OTP-based email verification via Brevo for secure user registration and booking confirmation; debugged and resolved complex async issues across the auth and booking flow.
- Developed separate user and admin dashboards; designed a fully responsive UI with React.js and Tailwind CSS; built RESTful APIs with Express and Mongoose following REST best practices.

Expense Tracker [Live Demo](#)

React.js · Firebase · Tailwind CSS

- Built a responsive expense tracking web app with Firebase Firestore for real-time sync, Firebase Authentication for secure login, and a clean accessible UI optimised for desktop and mobile; debugged performance bottlenecks to ensure smooth cross-device experience.

EDUCATION

Government College of Engineering, Keonjhar — 2022 – 2025

Bachelor of Technology — Computer Science and Engineering

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management, Computer Networks, Software Engineering

Government Polytechnic Jajpur — 2017 – 2020

Diploma in Engineering — Computer Science
